PROJECT
PRESENTATION

STATIONERY SALES DATA ANALYTICS SUITE

Thiranex Data Analytics Virtual Internship

Presented by

SHATAKSHI BISHT

Roll No. 2410030426

B.Tech CSE • IILM University, Greater Noida
Batch 2024–2028

Internship Domain: Data Analytics

Organization

Thiranex — Skill Development & Future Tech

Role

Intern — Data Analytics

Domain

Data Analytics

Duration

05 Aug 2026 – 04 Sept 2026

Student

Shatakshi Bisht

Institute

IILM University, Greater Noida

Thiranex

- Skill-development and future-tech organization offering remote, project-based internships.
- Interns work on practical, industry-mentored projects across a defined tenure.
- Progress is reviewed periodically against submission deadlines.
- Successful completion is determined by performance on each project task.

4-Task Project Journey

- 1 Stationery Sales & Revenue Dashboard**
Due 12 Aug 2026
- 2 Customer Segmentation Project**
Due 19 Aug 2026
- 3 Predictive Analytics Using Historical Data**
Due 26 Aug 2026
- 4 Data Cleaning & Reporting Automation**
Due 02 Sept 2026

How can raw stationery sales data be transformed into actionable business insights through interactive dashboards, customer segmentation, predictive forecasting, and automated data cleaning?

The project addresses this through four core deliverables:

Stationery Sales & Revenue Dashboard

Customer Segmentation Project

Predictive Analytics Using Historical Data

Data Cleaning & Reporting Automation

- Design and implement an end-to-end solution for stationery sales data analysis.
- Build an interactive dashboard to visualize sales, revenue and KPI trends.
- Segment customers using clustering based on behavior and demographics.
- Develop predictive models to forecast future sales trends.
- Apply data-cleaning techniques to handle missing values and duplicates.
- Automate reporting workflows to improve efficiency and consistency.

Python

Data analysis & scripting

Pandas / Excel

Data cleaning & processing

Power BI

Dashboards & KPI visualization

scikit-learn

Clustering for segmentation

Regression / Time-Series

Predictive forecasting

GitHub

Version control & project delivery

01

Sales & Revenue Dashboard

Import data from Excel/CSV, visualize KPIs, and build interactive charts, filters and slicers.

02

Customer Segmentation

Perform clustering with Python (scikit-learn) / Power BI to group customers by behavior and demographics.

03

Predictive Analytics

Apply regression / time-series models on cleaned historical data to forecast future sales trends.

04

Data Cleaning & Automation

Handle missing values and duplicates, then automate report generation and visual summaries.

05

Testing & Delivery

Validate each component independently, then track and submit deliverables against deadlines.

Dashboard & Segmentation

- Import sales data from Excel/CSV sources into a unified dataset.
- Visualize KPIs — total sales, revenue trends, top-performing products.
- Use charts, filters and slicers for interactive analysis.
- Apply clustering (scikit-learn / Power BI) to segment customers.
- Analyze purchase patterns and customer preferences.
- Visualize segments and their key characteristics.

Predictive Analytics & Automation

- Use regression / time-series models for sales forecasting.
- Clean and preprocess historical datasets before modeling.
- Evaluate model accuracy and visualize predictions.
- Automate data cleaning with Python, Excel, or Power BI.
- Handle missing values, duplicates and inconsistent records.
- Generate automated reports and visual summaries.

- Data visualization, KPI tracking, and business insight generation.
- Hands-on experience in customer analytics, segmentation, and targeted insights.
- Practical exposure to predictive modeling, trend analysis, and forecasting.
- Understanding of data preprocessing, automation, and reporting efficiency.
- Improved skills in Python, Power BI/Excel, and end-to-end analytics workflows.
- Better connection between theoretical concepts and real-world data problems.

Challenges & Solutions

- Missing values & duplicates → resolved with automated Python/Pandas cleaning routines.
- Choosing the right clustering approach → tested multiple algorithms and features for segmentation.
- Balancing model accuracy vs. simplicity → compared regression and time-series approaches.

Future Scope

- Deploy the sales dashboard as a live, shareable web application.
- Explore deep-learning models for more accurate demand forecasting.
- Integrate real-time / streaming data pipelines for continuous updates.
- Extend segmentation with RFM (Recency, Frequency, Monetary) analysis.

Offer Letter — Thiranex

Certificate of Completion — Thiranex

CONCLUSION

The Stationery Sales Data Analytics Suite delivered practical, end-to-end experience — from data cleaning and dashboarding to customer segmentation and predictive forecasting. The internship also provided structured, industry-mentored exposure to real project timelines and deliverables.

Technical

Data cleaning, dashboards, segmentation & forecasting

Development

Modular, task-based implementation and testing

Internship

Structured, industry-mentored remote learning

Thank You
